25X1A Visit to [REDACTED] Electronics Division

25X1A

25X1A 1. On 14 February 1958, a visit was made to the [REDACTED]  
25X1A [REDACTED] Electronics Division, [REDACTED] California, to investigate the capability of that company  
as a possible contractor. Discussions were held with:

25X1A [REDACTED] Contractual Administrator  
[REDACTED] Production Chief

25X1A 2. The [REDACTED] Company is primarily developing and  
producing automatic, semi-automatic and manual test equipment for  
missiles and training aides for the U.S. Air Force, such as flight  
simulators and gunnery trainers. Sub-miniature/sub-miniature elec-  
tronic products such as power amplifiers, DC amplifiers and phase  
discriminators are being developed [REDACTED] in their Research and Development Section. 25X1A

3. The Research and Development capabilities of this company  
are limited. Some thirty engineering personnel are employed. The  
laboratory facilities and equipment are mediocre. It did not  
appear that this company has adequate capability for doing R&D work  
for the Agency. It is felt that the attached brochures support  
this.
